SPECIAL OFFER INCLUDES ONE OF THE TRANSDUCERS BELOW

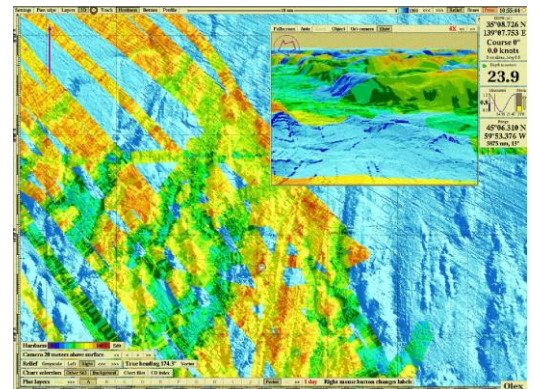

TDM-052 Transducer (38-75kHz & 130 – 210kHz)

TDM-062 Transducer (38 – 75kHz & 85 – 135kHz)

NOW COMPATIBLE WITH OLEX

CVS-FX Broadband Echo Sounders can now output both depth and hardness data to the Olex system on every depth transmission for a detailed 3D seabed map.

If the Olex system has the optional HT seabed discrimination module installed then Koden's hardness data output will be utilized to produce a 3D seabed image with Bottom Hardness (Ground Discrimination) shown, thus enhancing fishing based on bottom contour and bottom hardness information.

OLEX 3D Image and Hardness information
